## Innovation Organization Control

## The context

The adoption of a quality system in accordance to the requisites of UNI ISO 15189 underlines the necessity of clinical laboratories to satisfy their clients' needs, providing useful information to the clinical decisions that must be taken for the diagnosis, prognosis and monitoring of both the patients' health status and pathologies.

Nevertheless, the implementation and management of the processes requested by the standard may represent a path both complex and expensive for laboratories, either public or private, and they are very often accomplished through inadequate tools.

# The solution

KaliLab is the solution by Netika, now part of the Dedalus Group, which may efficiently support and guide laboratories in the accreditation path for obtaining the UNI ISO 15189 certification "Medical laboratories - Requirements for quality and competence".

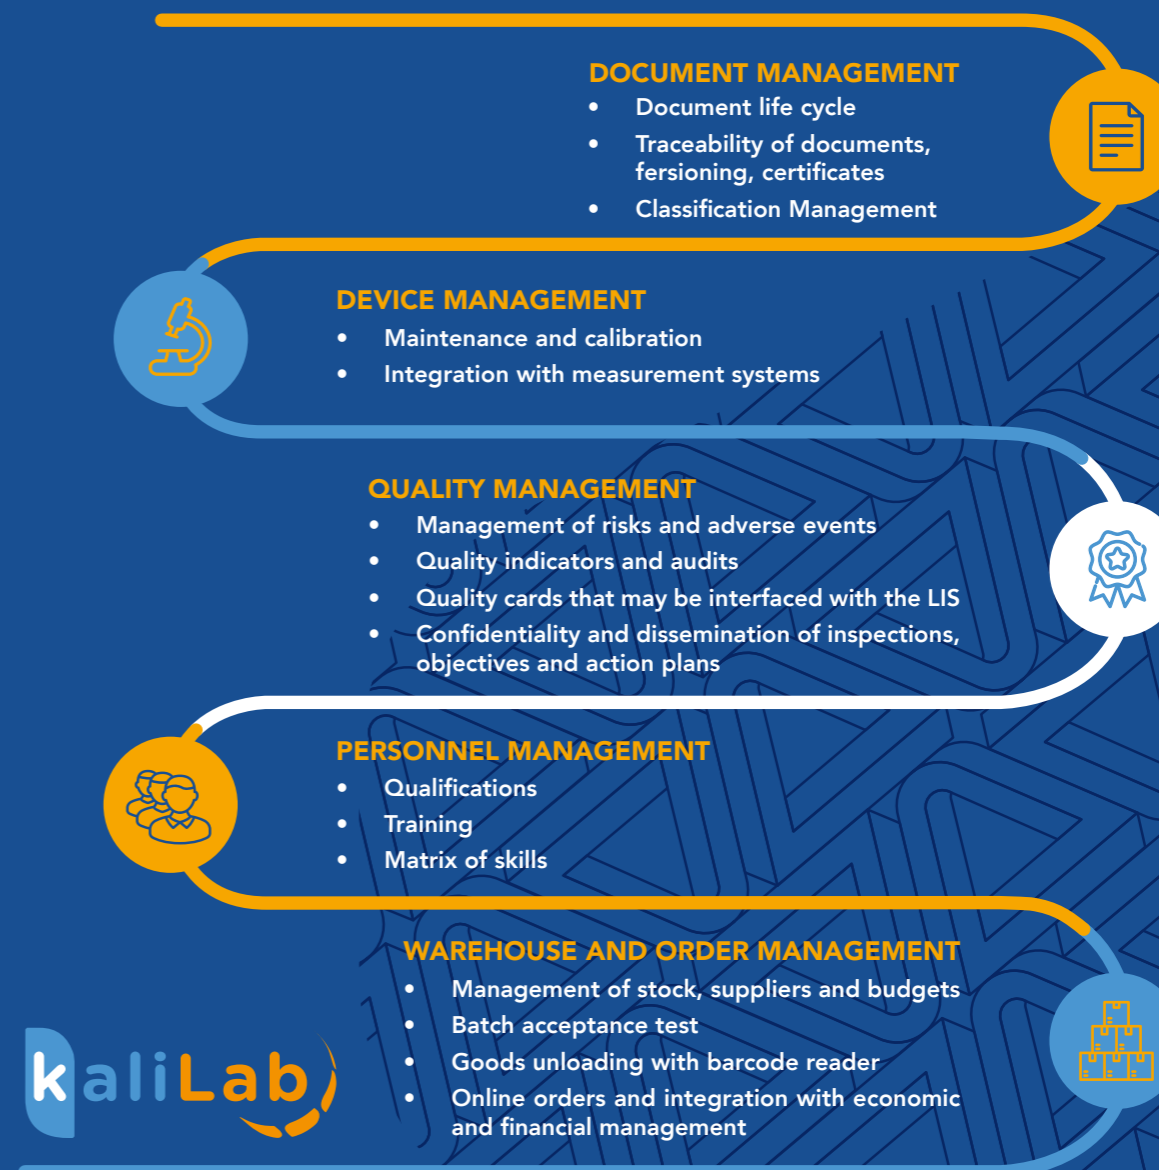

The initial accreditation and maintenance of the requirements demand a very challenging and difficult process; thanks to Kalilab it is possible to manage the quality in its entirety, the personnel with specific qualifications and the warehouse with the related orders, in order to guarantee to laboratories a complete traceability of the whole process, from the pre-analytical, to the analytical and post-analytical phase.

## Functional completeness in process management:

- Document Management
- Quality Management
- Device Management
- Personnel Management
- Warehouse and Order Management

Based on the adoption of structured methods, on the involvement of all personnel, customers and suppliers, on documented and recorded information, KaliLab helps companies to better organize themselves, according to a continuous improvement process:

- Collection and synthesis of laboratory data
- Data processing and risk management
- Editing forms
- In compliance with standards NF EN ISO / IEC 17025, NF EN ISO 15189 and NF EN ISO 9001
- Simple, ergonomic, with many interconnections
- Traceability is everywhere

# Strenghts

1

## ADHERENCE TO STANDARDS

Compliance with GBEA, NF EN ISO 9001, NF EN ISO 15189 and NF EN ISO / CEI ISO 17025

2

## ACCESSIBILITY

Ergonomic and intuitive navigation

3

## CONFIGURABILITY

Complete personalization and adaptation to the laboratory needs

4

## FLEXIBILITY

No limit of stations and full parameterization according to use
